ABOUT ME

I am a highly driven and technically proficient student with a strong foundation in computing and artificial intelligence, developed through academic studies and self-driven projects. While I have not yet held a professional position in the field, I am eager to apply my knowledge of Python, Java, C++, HTML & CSS, SQL, Machine Learning, Tableau, and Looker to contribute to real-world solutions. I am confident in my ability to lead by example, driving innovation and fostering collaboration to achieve impactful outcomes. With a commitment to continuous learning and excellence, I am prepared to step into a role where I can leverage my skills to deliver strategic insights and add value to both team dynamics and business goals.

EMPLOYMENT HISTORY

May 2024 — Present	Warehouse Associate, The Beer Store	Oshawa
	• Performed data analysis to track inventory levels, identify trends, and optimize stock replenishment. • Managed order processing by ensuring accurate order picking, packing, and timely dispatch of products to customers. • Picked orders efficiently by following established guidelines, ensuring the correct products were selected and ready for shipment. • Operated warehouse machinery, including forklifts and pallet jacks, to safely move inventory and maintain efficient workflows. • Utilized lifting equipment to safely handle heavy cases and pallets, ensuring adherence to safety protocols. • Collaborated with team members to improve order accuracy, reduce processing time, and meet daily performance targets. • Monitored inventory levels and flagged discrepancies for corrective action, ensuring stock availability and order fulfillment. • Maintained accurate records of orders, shipments, and inventory, ensuring seamless operations and proper documentation.	
Dec 2025 — Present	Software Development Contractor, Arktis Solutions Inc.	Kingston
	• Developing a cross-platform React Native + Expo mobile app for Kivalliq Region communities featuring job/training listings and employer job posting/management workflows. • Implementing job seeker + employer flows with React Navigation, including role-based routing and authentication-gated access. • Building reusable UI (lists, forms, dashboards) with responsive layouts for iOS/Android, plus validation and consistent styling. • Using mock/demo data to prototype quickly, then integrating REST APIs with loading/error handling and session persistence. • Testing with Expo Go, iOS Simulator, and Android Emulator; managing code with Git/GitHub and preparing builds/releases via EAS. • Tools Used: React Native, Expo, TypeScript/JavaScript, React Navigation, Expo Go, EAS Build, Git/GitHub, VS Code, iOS Simulator, Android Emulator, REST APIs	

EDUCATION

2019 — 2023	High School, St. Michael's College School	Toronto
	Awards: • THE ST. MICHAEL'S MEDAL (LAW) • ONTARIO SCHOLAR • ST. THOMAS MORE SOCIETY AWARD (Top 5 Average in Grade 9-11)	
2023 — Present	Bachelor of Science with Specialization in Artificial Intelligence, Queen's University	Kingston
	Courses: • Computer Architecture, Logic For Computing, Statistics, Discrete Structures II, Cognitive Science, Data Structures, System-Level Programming, Software Specifications, Linear Data Analysis, Software Quality Assurance, Numerical Optimization For Artificial Intelligence	

COMPUTING PROJECTS

2022	World Cup Challenger I developed a World Cup-themed game in Python, inspired by <i>Space Invaders</i>. In the game, players control a national team, defending their goal against waves of attacking teams from different nations. Each level represents a match, and to progress to the next round, players must shoot soccer balls at the increasingly challenging opponents. As the difficulty ramps up, players must defeat every team to qualify for the final and win the World Cup. The game was built using Python's libraries for graphics and game logic, creating a dynamic and engaging experience.
2023	The Jon Snow Chronicles I developed a 2D platform game using Java, inspired by the TV series <i>Game of Thrones</i>. In this game, players control the character "Jon Snow" as he navigates through iconic battles from the series. Each level is carefully designed to reflect key moments, and the player encounters a variety of enemies based on the show's lore. I utilized Java's graphic libraries to create the game's visuals, implementing character movements, enemy interactions, and environmental elements.
2024	Customer Sentiment Analysis Tool In this project, I developed a customer sentiment analysis tool that leverages machine learning and data visualization to derive actionable insights from customer reviews. Using Python for data preprocessing and analysis, I cleaned and prepared the text data, applied sentiment analysis using a Random Forest model, and achieved strong predictive accuracy. The insights from this analysis were visualized in a dynamic Tableau dashboard, allowing the user to explore customer sentiment trends, identify areas for improvement, and track customer satisfaction over time.
2024	Legal Document Analyzer I developed a Python-based 'Legal Document Analyzer' app to merge my programming expertise with my passion for law. The app was designed to support lawyers by quickly analyzing lengthy legal documents, providing a more efficient method to identify and review crucial clauses and potential red flags. I used Python's spaCy library for natural language processing to identify legal terms and a custom rule-based engine to flag specific issues in the documents. For this project, I'm glad I was able to combine my programming skills with my interest in law.

EXTRA-CURRICULAR ACTIVITIES

Jan 2025 — Present	Vice President, Association of Balkan Students at Queen's University Kingston • Led and coordinated a team to plan and execute cultural, educational, and social events that celebrated Balkan heritage and promoted cultural awareness on campus. • Developed and managed relationships with university administration, student organizations, and external partners to ensure successful events and initiatives. • Organized fundraising campaigns and managed the budget to support association activities and initiatives. • Communicated with members through regular newsletters, meetings, and social media updates to keep the community engaged and informed. • Advocated for Balkan student interests at student council meetings, ensuring representation and support for cultural initiatives. • Promoted diversity and inclusion by fostering a welcoming environment for students of all backgrounds to engage with Balkan culture. • Implemented strategic planning to increase membership, improve event attendance, and elevate the association's presence on campus.
