ABOUT ME

Fourth-year Artificial Intelligence student at Queen's University (graduating May 2027) with hands-on experience building and shipping real software. As a Software Developer Intern at Arktis Solutions, I build mobile and web applications for Indigenous organizations in Nunavut and support the firm's financial and policy consulting work. Outside of work, I am independently building Spursit, a fan app for Tottenham Hotspur supporters, from concept to App Store launch. I work across Python, Java, C++, TypeScript, React Native, SQL, and machine learning, and I am driven by building tools that people genuinely use.

EMPLOYMENT HISTORY

Dec 2025 — Present

Software Developer Intern, Arktis Solutions Inc.

Kingston

Kivalliq Jobs & Training App

- Built a cross-platform **React Native + Expo** mobile app for **Kivalliq Region** communities, connecting job seekers with **job and training listings** and giving employers tools to **post and manage openings**.
- Delivered **bilingual Inuktitut** (syllabics and roman orthography) and English support, with **offline / low-bandwidth** handling suited to northern connectivity.
- Implemented role-based job seeker and employer flows with **React Navigation** and authentication-gated access, backed by **Supabase** and REST APIs with session persistence.
- Tested across Expo Go, iOS Simulator, and Android Emulator; managed code with **Git/GitHub** and shipped builds via **EAS**.

Arktis PM, Project Management Web App

- Built **Arktis PM**, an internal project management web app with a polished, Linear-style interface using **React, Tailwind CSS, shadcn/ui**, and **Framer Motion**, including a **Cmd+K command palette** for fast navigation.

Financial & Policy Consulting

- Supported **financial and accounting analysis** for Indigenous clients, including a financial review related to a major mining operator (Agnico Eagle).
- Produced a **comparative analysis of Inuit Impact and Benefit Agreements (IIBAs)** for the Kivalliq Inuit Association to support its negotiating position.
- Drafted a detailed **work plan** for a Community Impact and Readiness Study across five Kitikmeot communities, including engagement methodology, a level-of-effort staffing matrix, and a risk register.

May 2024 — Present

Warehouse Associate, The Beer Store

Oshawa

- Tracked inventory levels and flagged discrepancies for corrective action, supporting accurate stock replenishment and order fulfillment.
- Picked, packed, and dispatched orders accurately while collaborating with the team to meet daily performance targets.
- Operated forklifts and pallet jacks safely, maintaining accurate records of orders, shipments, and inventory.

COMPUTING PROJECTS

2026 — Present

Spursit, Tottenham Fan App (iOS)

- Designing and building **solo** an unofficial iOS fan app for Tottenham Hotspur supporters, **launching soon on the App Store** with promotional support from **Spurs fan influencers**.
- Built with **Expo (React Native)**, **TypeScript**, and expo-router on a **Supabase** backend (Postgres, Edge Functions, pg_cron), engineered for near-zero running cost.
- Created **Lily**, a custom **AI agent** with knowledge of Tottenham's entire club history that fans can ask any question, from historic matches and players to records and trivia.
- Created a **pub and watch-venue finder** covering 113 supporters' clubs with distance sorting and deep-linked directions to Apple/Google Maps, plus an **Away Day Hub** for match travel planning.
- Automated a **match results pipeline** (API-Football via scheduled pg_cron jobs) and embedded live match widgets, alongside fan polls and a curated news feed.

2023	The Jon Snow Chronicles A 2D platformer in Java inspired by <i>Game of Thrones</i> , with levels built around iconic battles, character movement, enemy interactions, and custom graphics.
2022	World Cup Challenger A World Cup-themed, <i>Space Invaders</i> -style game in Python where players defend their goal against waves of national teams with escalating difficulty.

SKILLS

Languages: Python, TypeScript/JavaScript, Java, C++, SQL, HTML & CSS
Mobile & Web: React Native, Expo, expo-router, React, Tailwind CSS, shadcn/ui, Framer Motion, REST APIs
Backend & Data: Supabase, PostgreSQL, Machine Learning, spaCy, Tableau, Looker
Tools: Git/GitHub, EAS Build, Xcode iOS Simulator, Android Emulator, VS Code

EDUCATION

2023 — 2027	Bachelor of Science, Specialization in Artificial Intelligence, Queen's University <i>Expected graduation: May 2027</i> Relevant courses: Operating Systems, Evolutionary Optimization and Learning, Numerical Optimization for AI, Data Structures, System-Level Programming, Computer Architecture, Software Specifications, Software Quality Assurance, Linear Data Analysis, Logic for Computing, Discrete Structures II, Statistics, Cognitive Science	Kingston
2019 — 2023	High School, St. Michael's College School Awards: The St. Michael's Medal (Law); Ontario Scholar; St. Thomas More Society Award (Top 5 Average, Grades 9–11)	Toronto

EXTRA-CURRICULAR
ACTIVITIES

Sep 2026 — Present	CasConnect Advisor, Queen's Computing Students' Association (COMPSA) Support fellow Queen's computing students through COMPSA's CasConnect program, helping them connect with the resources and community available in the School of Computing.	Kingston
Jan 2025 — Present	Co-President, Association of Balkan Students at Queen's University - Led and coordinated a team to plan and run cultural, educational, and social events celebrating Balkan heritage on campus, growing membership and event attendance. - Managed relationships with university administration, student organizations, and external partners, and organized fundraising and budgeting. - Rebuilt the association's website, migrating it from Google Sites to GitHub Pages with a custom design.	Kingston
